**ask kids to color the plants
leaves and read the simple
notes above each one in the
app in the plants category**

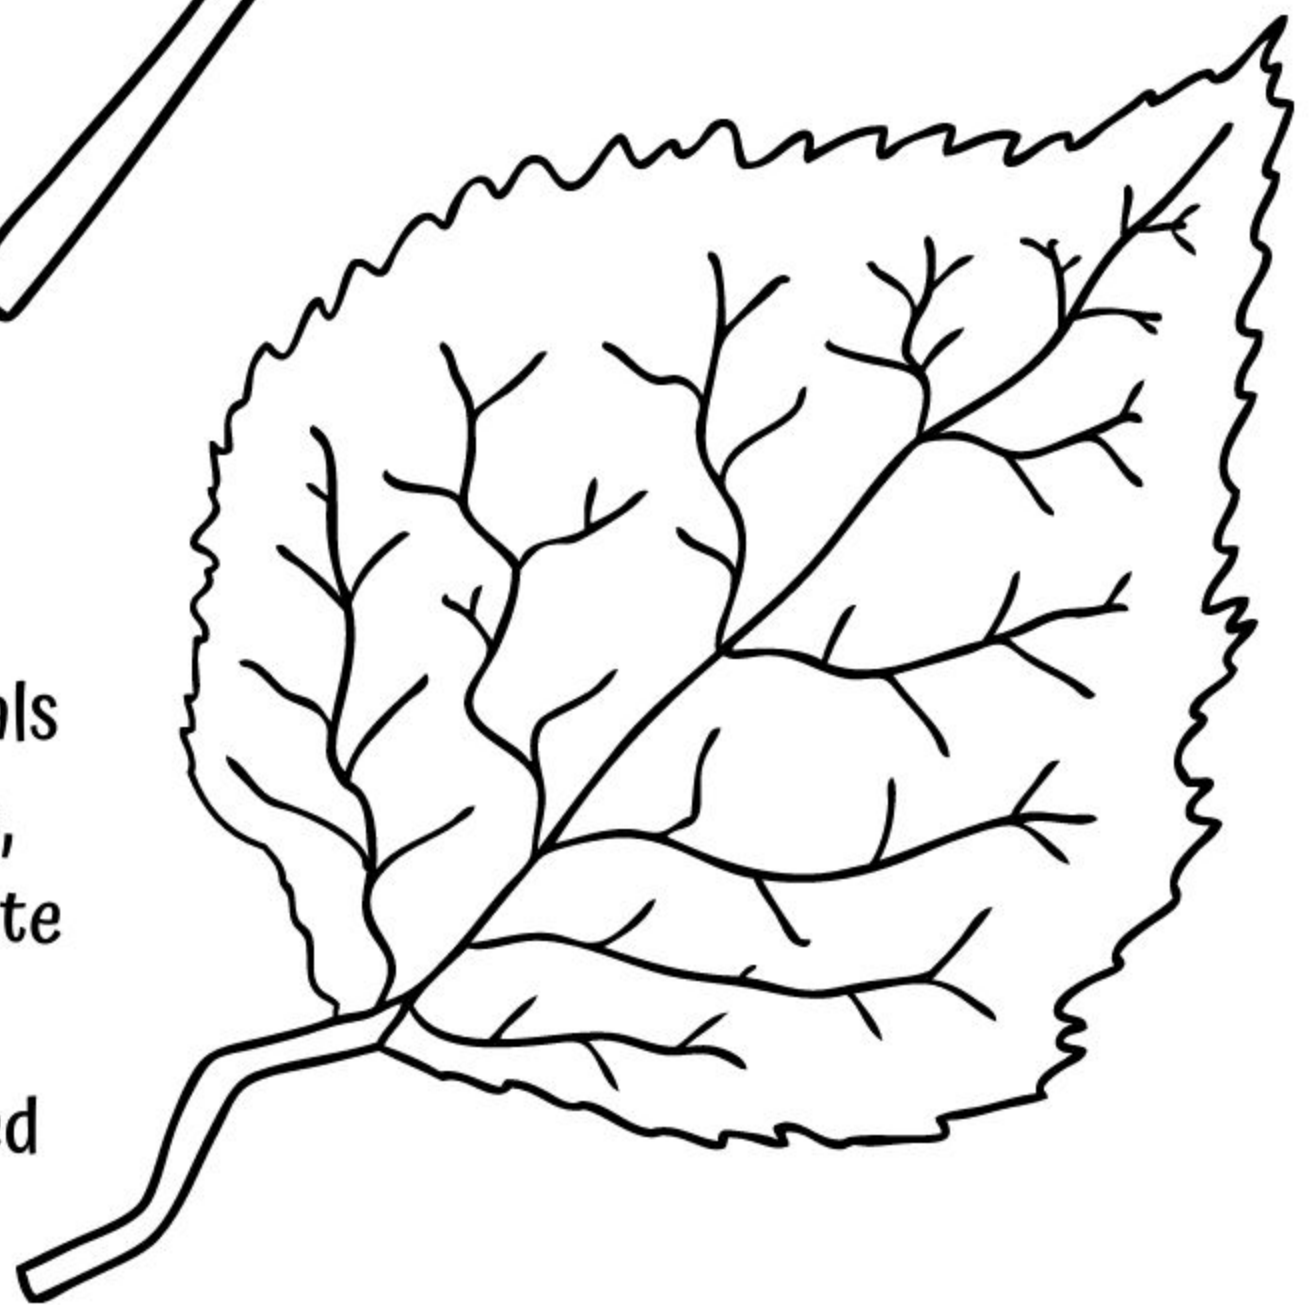

Different colors

Color leaves bellow with three different colors.

Leaves actually get their color from things called pigments. While scientists can use chemicals to make different crayon colors, nature can use pigments to create its own colors. When leaves are green, they have a pigment called chlorophyll.

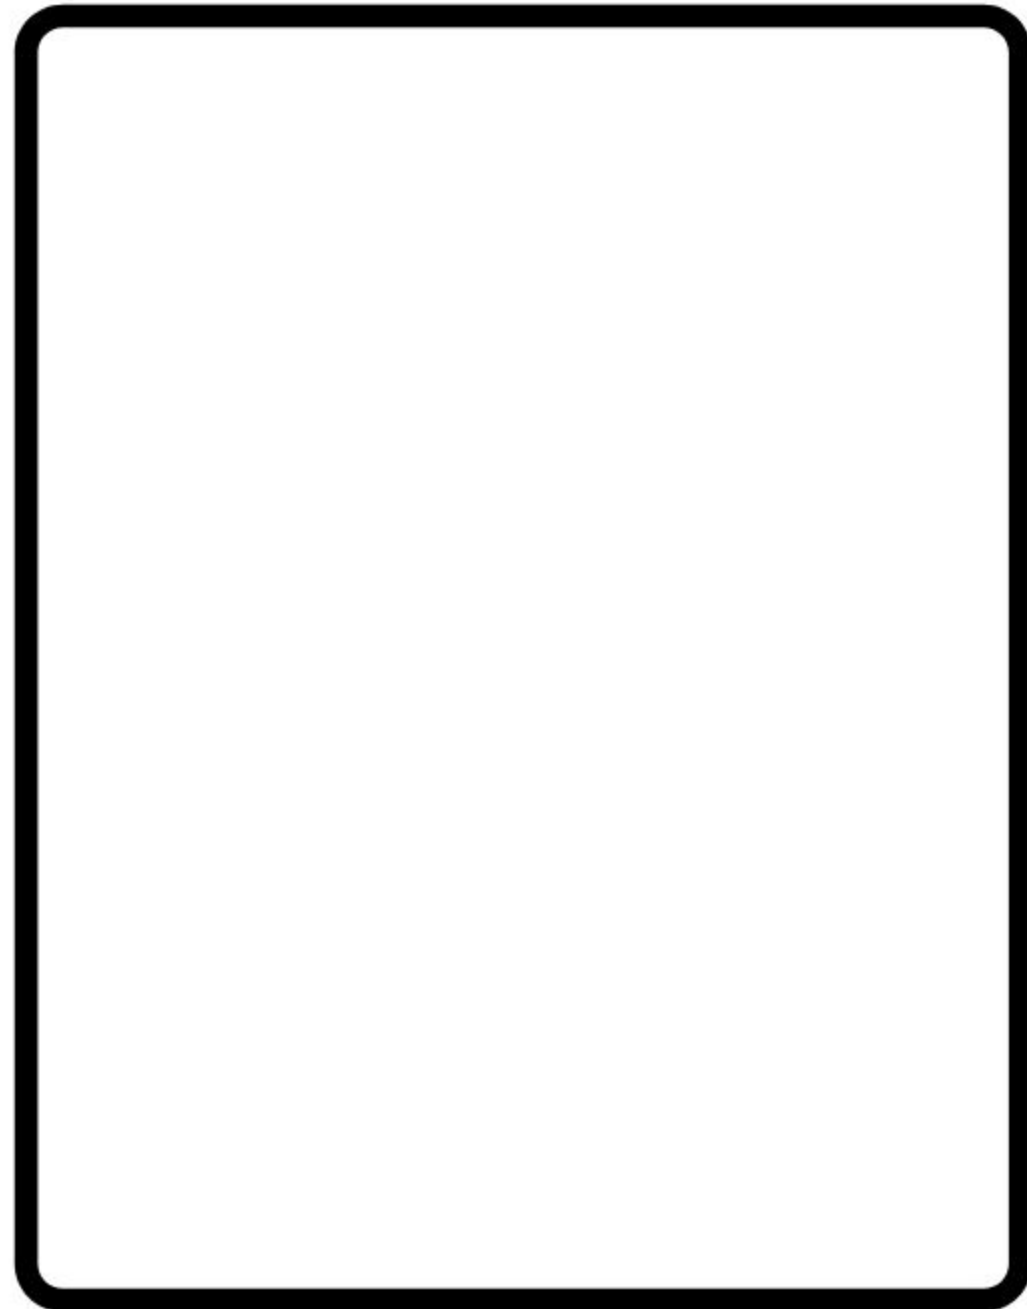

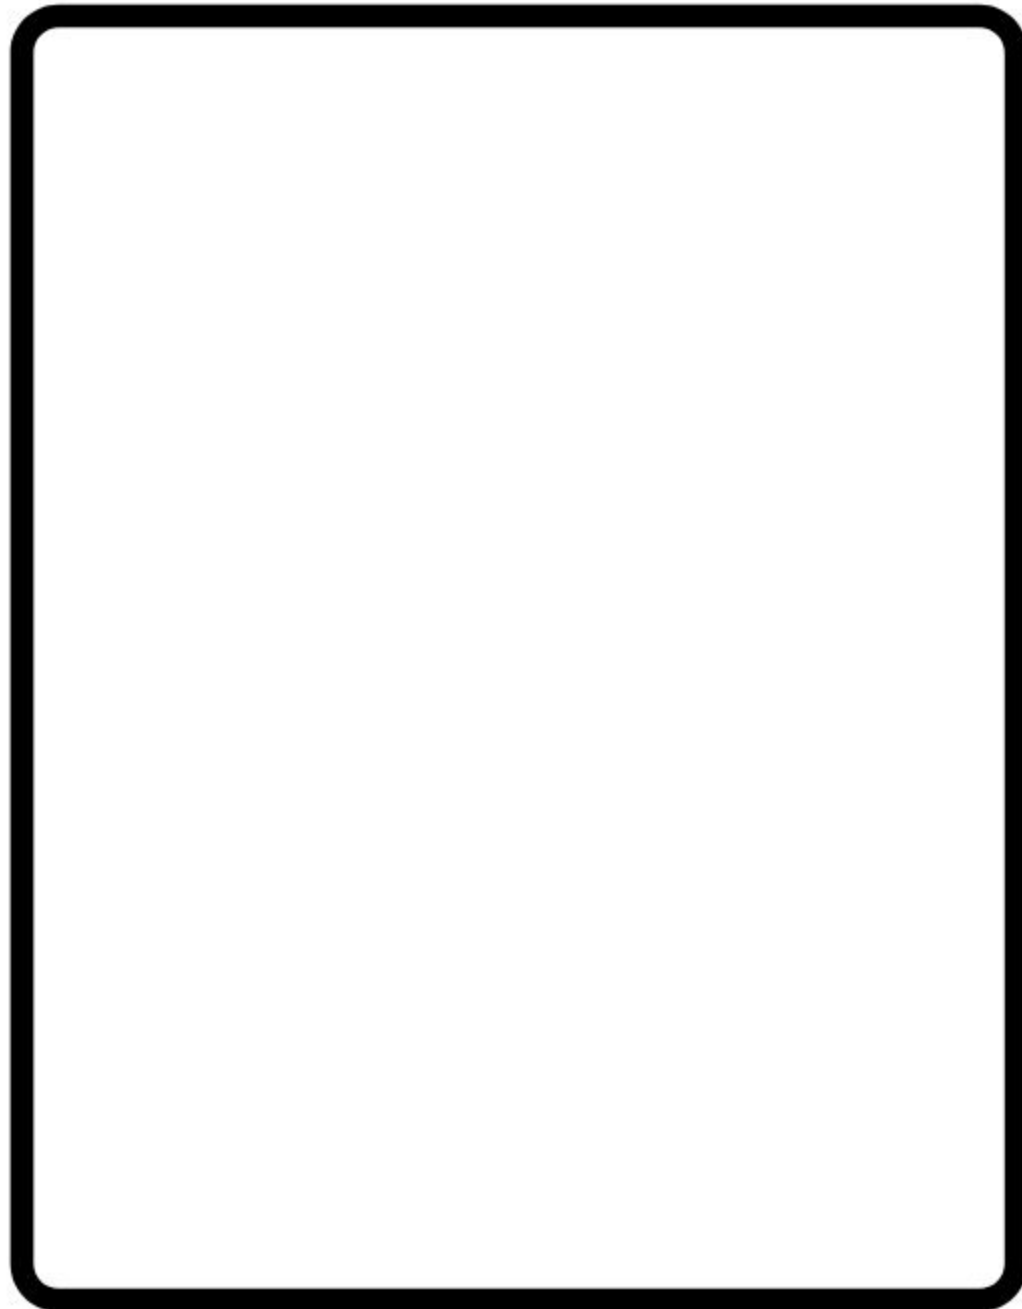

Different size

Try to find three different size leaves and draw them.

leaves have different sizes according to the environmental conditions and plant type. This play a role in how sunlight is intercepted by the leaf. smaller leaves have smaller light absorptive surface area.

Size, shape, color

Use different colored papers to cut and paste 3 different leaves.

Try to make the
three leaves
different in shape
size and color.
